within these fields:

ENGINEERING IT

We offer:

- ▶ Full-time jobs
- ▶ Internships
- ▶ Cooperation on master thesis
- ▶ Cooperation on school projects
- ▶ Cooperation on PhD projects

# Creating the Future in Laundry Automation

## ADVERTISEMENT

**The JENSEN-GROUP is the market leader in automated machines and processing lines for industrial laundries all over the world. The group's Danish unit, JENSEN Denmark, is situated on Bornholm.**

After studying and working in Aalborg for ten years, 32-year-old Tobias Leth was ready to leave the town in North Jutland. When JENSEN Denmark offered him a job in June 2019, he didn't think twice about moving to the island in the Baltic Sea:

»Bornholm is only an hour away from Aalborg by plane, so it's not really that far. I wanted to work for an international company with an opportunity to work abroad. The JENSEN-GROUP has business units and customers all over the world, and during my first five months, I have already travelled quite a bit. In the future, I could see myself working in other parts of the JENSEN-GROUP, outside of Denmark.«

### I HAVE INFLUENCE ON MY OWN TASKS

The JENSEN-GROUP is an engineering and manufacturing company with the entire value chain in-house – from

development and production to sales and service.

»It speeds up the development process, making it exciting to work here,« says Tobias who works as a Technical Specialist in Product Development.

With a Master's degree in mechatronic control engineering and a PhD in electrical engineering, he is keen on improving the machines by adding more intelligent control systems. »We have ample potential for improving our products, making them more efficient and lowering their consumption of water, electricity and natural gas. I am involved in choosing which improvements should be tackled next, and thus I get to choose my own tasks to a large extent,« he says and adds:

»Seeing the potential for improvement is one thing; acting on it is another. JENSEN has the will to improve, and it is reflected in our numerous development activities. Furthermore, the decision-makers listen to the employees who know the products in-depth, which results in better solutions.«

We wish to maintain our leading position in the market and are continuously seeking new employees to strengthen our development activities.
