

JOIN A LEADING PROVIDER OF WIRELESS SOLUTIONS

RTX A/S – a growing business driven by digitalization and the demand for mobility and secure transmission. RTX has successfully finalized more than 1,000 wireless projects, ODM or OEM solutions in collaboration with global technology brands - from initial design, development, testing and production. RTX operates through the business areas: Enterprise communications, ProAudio solutions, and Healthcare technology with a broad exposure to global brands in many different industries. Join us and be a part of a leading provider of wireless solutions.

Our products are the secret ingredient

ADVERTISEMENT

RTX designs and manufactures innovative wireless communication solutions that are resold by world-leading brands to customers across the globe.

After more than 25 years in the industry, RTX has extensive experience with the design, development and production of advanced wireless solutions. The company's products have three main application areas: Business communication solutions such as wireless handsets and headsets, professional audio which includes wireless microphones and other solutions for concerts and conferences, and healthcare solutions where wireless systems are used for monitoring critically ill patients, among others. »We are an original design manufacturer, ODM, which means our customers buy our products and rebrand them. Our logo is never visible, so we are like the secret ingredient in the sauce,« says Peter Røpke, CEO of RTX.

UNFOLD YOUR AMBITIONS IN AN INTERNATIONAL ENVIRONMENT

Most of the customers are world-leading global enterprises, and RTX itself is an international company with offices

in Hong Kong and the USA. »We offer our employees a multitude of opportunities for unfolding their technical ambitions and developing their skills in an international environment where they get to cooperate with customers and technology partners around the world. At the same time, we have an informal working atmosphere where we practice freedom with responsibility,« says Peter Røpke.

Innovation is an important part of RTX's mission. The company strives to stay on the forefront of the technical disciplines of its field, e.g. by cooperating with master's students and PhDs from the universities.

CREATE VALUE FOR CUSTOMERS

RTX is looking for engineers with strong technical skills in software and systems design or an interest in project management or technical key account management. »On one hand, our company is very technical and geeky, but on the other hand, we are also commercial. We want to create ground-breaking technologies while also creating value for our customers and end-users. That is the basic premise,« Peter Røpke concludes.
