SimCorp is always on the lookout for people with a sharp technical intellect. Coming from a theoretical background, it can be difficult to connect what we do at University and what is done at the first job we find. SimCorp took the stress out of that by training me up into a Test Analyst. In this role I still get to challenge my theoretical intellect, but also add value to my team...

JEPPE SIDENIUS
Test Analyst, SimCorp

COME AND ENGINEER THE FUTURE OF THE INVESTMENT MANAGEMENT INDUSTRY

With 20% of our revenue going into R&D, we are constantly working on improving and streamlining our product to make sure it meets the growing demands from our clients.

Jeppe is part of SimCorp's Product Division, joining us as a recent graduate from DTU where he studied Mathematical Modelling and Computing. As our business grows, so do our needs. We are constantly on the lookout for newly graduated students within Physics, Communications Technology, Mathematical Engineering, and Software.

WE TREASURE TECHNOLOGY

ABOUT SIMCORP

SimCorp is the world's leading provider of integrated investment management solutions. Many investment managers operate in a patchwork of single-purpose IT systems. SimCorp offers an alternative solution; a truly integrated front-to-back system that gives real-time overview of the investment manager's entire business in one system.

From theory to practice

ADVERTISEMENT

With a background in theoretical mathematics, 28-year-old Jeppe Sidenius appreciates that his work at SimCorp is immediately applicable and creates value for customers.

After graduating as an MSc in Mathematical Modelling and Computation from DTU, Jeppe continued as a research assistant with the purpose of preparing for a PhD. But along the way, he realised that it was time to try his strength in the business world.

»One of my professors gave my email address to my current manager at SimCorp, and I was invited for an interview,« he tells and continues: »To be honest, I was unsure about what I had to offer. SimCorp is a financial technology company, and my background is in theoretical mathematics, not software or finance.«

SUPPORTED BY SKILLED COLLEAGUES

But Jeppe's studies had given him a strong ability and willingness to learn. That was enough, and he was hired in March 2019. »People at SimCorp are curious to learn and explore. As a new employee, you go through a three-month

onboarding programme where you learn about finance, agile software development, technology tools etc. The culture is very supportive, and you are surrounded by skilled colleagues who care about your personal development and your ability to create value for our clients. Ultimately, we are driven by our passion to create value,« he says.

RESPONSIBILITY AND SELF-INNOVATION

Working as a Tester, Jeppe performs quality control of the code written by software developers. »I thought it would take a long time for me to be able to contribute. But I am constantly producing something that is immediately applicable – as opposed to theoretical mathematics. I am part of a team that works to improve our products which is an amazing feeling,« he says and concludes:

»I feel like people depend on me, and I have learned to take responsibility. The good thing about SimCorp is that if you are committed, you are allowed to move in different directions and innovate yourself.«
