

Kick-start your career at Vestas

By joining a leader within the sustainable energy industry, you will become part of a truly global company with more than 25.500 employees worldwide.

At Vestas you will have the opportunity to:

- Explore the sustainable energy industry
- Experience working life in a global organisation
- Exploit your theories and methodologies in a real context

We set the pace in the industry to the benefit of the customers and our planet. By working here, you have the chance to benefit from:

- Our many global work locations
- Our strong focus on professional and personal development
- Our emphasis on providing you with tools, support and knowledge to learn on the job

Vestas®

Wind. It means the world to us.

VESTAS GRADUATE PROGRAMME

The Vestas Graduate Programme is a two-year international programme containing two twelve-month assignments.

The first assignment is already defined, while the second assignment allows you to explore other functions with a progressive increase in challenge and responsibility.

Vestas was the natural choice for me

ADVERTISEMENT

Sustainability has always been important to Heidi Hakso, and during her Bachelor's studies in environmental engineering, it became clear that renewable energy is her field. Thus, it was only natural that she applied for a position at one of the energy industry's leaders, Vestas.

Heidi received her Bachelor's degree in her home country, Finland, and then moved to Copenhagen to pursue a Master's degree in sustainable energy at DTU. During her final year, she was employed as a student worker in Vestas' Product Management department in Copenhagen where she worked with product development of Vestas' hardware and software service solutions.

CONSTANTLY PUSHING THE ENVELOPE

»I feel like energy is one of the most crucial keys to fighting climate change. Being in the Nordics, wind power is currently the leader. What makes it really interesting is that despite the fairly simple operating principle, there are so many different aspects to consider such as mechanical and control engineering working together. The field is so innovative, constantly getting bigger and better,« Heidi says and adds:

»Vestas was the natural choice for me because it is a market leader. We are constantly pushing the envelope and trying out new things, and I get to be around people who feel the same way about renewable energy as I do. Furthermore, Vestas is an international and multicultural company that also offers the possibility to work in different countries. It is exciting to be exposed to all these different cultures and functionalities.«

AN OPPORTUNITY TO CHALLENGE MYSELF

When Heidi graduated in August 2020, she went directly into the Vestas Graduate Programme, which consists of two one-year rotations. She is currently on her first rotation in the Nacelle Engineering department at Vestas' headquarters in Aarhus where she works in business development with focus on supplier partnerships.

»I really wanted to get into the programme because you gain wide knowledge. You can try out different things and find out where you want to focus. I am quite ambitious, and for me, this is a great opportunity to challenge myself,« she says.
